

Enterprise Computing and Storage Systems

Key to Sanmina-SCI's long-term partnerships with leading Enterprise Computing and Storage OEMs is our cost-effective approach to providing a comprehensive set of end-to-end manufacturing solutions that are reliable, flexible and scalable.

Moreover, our leadership and clear vision is supported by our server and storage product development capabilities, and our build-to-order (BTO) and configure-to-order (CTO) expertise. Sanmina-SCI expects to enhance our position in this sector by developing a growing catalog of solutions that include the new scalable chip "Horus," an interconnect chipset permitting server vendors to design up to 32-way Opteron™ systems.
